HOW TO DETECT AND CHASE DOWN WATER LEAKS

According to the EPA, water leaks account for nearly 1 trillion gallons of water wasted each year. The average household leaks approximately 10,000 gallons of water **PER YEAR!**

As your clients take on home ownership, the importance of keeping costs down become vitally important, as many homebuyers are already nervous about their affordability of the home.

The EPA has many great resources on their website that help homeowners understand where common household leaks occur, how to identify the leak and how to remedy the situation.

In addition, the EPA has a 10 Minute WaterSense Challenge that guides property owners through the steps of gathering clues to a possible water leak.

The checklist provided is a great start to identifying leaks and fixing the situation before they can cause structural damage to the property and/or contribute to mildew and mold that can greatly affect the air quality that the occupants are breathing.

Here is the link to the [10 Minute WaterSense Challenge](#) provided by the EPA.

Take a minute to access the challenge, print the two page document and provide to you clients as they move into their new home.
